

RECALL

Recall

- Recall is a metric that quantifies the number of correct positive predictions made out of all positive predictions that could have been made.
- Unlike precision that only comments on the correct positive predictions out of all positive predictions, recall provides an indication of missed positive predictions.
- In this way, recall provides some notion of the coverage of the positive class.

n=165		Predicted: NO	Predicted: YES	
Actual: NO		TN = 50	FP = 10	60
Actual: YES		FN = 5	TP = 100	105
		55	110
